Skill-2

aws
Keep your account secure
Registering your MFA for root credentials will be required in 14 days.
Improve the security of your account by registering multi-factor authentication (MFA) using one of the options below. This provides a second means of verifying your identity in addition to your password. Learn more
MFA device name
Device Name
Maximum 128 characters. Use alphanumeric and '+ = , . @ - _' characters.
Passkey or Security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.
AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.
Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.
Hardware TOTP Token
Authenticate using a code generated by hardware TOTP token or other hardware devices.

Set up authenticator app
An authenticator app is an application running on your device that you can configure by scanning a QR code.
1
Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
See a list of compatible applications
2
Show QR code
Open your authenticator app, choose Show QR code on this page, then use the app to scan the code.
Alternatively, you can type a secret key.
(Show secret key)
3
Enter two consecutive codes from your authenticator app. Enter the first code, wait a few seconds and then enter the second.
First code
6 digit code
Second code
6 digit code
Cancel
Register MFA

aws
Register virtual MFA device
You have successfully assigned this virtual MFA device.
We encourage registering multiple MFA devices in case your primary method is lost or inaccessible.
